e.)

b.)  $0^*1110^*$

g.)  $(\Sigma\Sigma\Sigma\Sigma\Sigma)^*$

i.)  $1\Sigma^*(1)$

f.)

b.)	<u>True</u>	<u>False</u>
	abab	aaaa
	aabab	bbbb
f.)	<u>True</u>	<u>False</u>
	aba	aaa
	bab	bbb
h.)	<u>True</u>	<u>False</u>
	a	b
	ba	$\emptyset$ (empty set)

g.)

- a.)
- b.)
- c.)  $A1 = \{a^{2^n} \mid n \geq 0\}$  is regular  
 $S = a^{2^p} = xy^iz$   
Condition 3.)  $|xy| \leq p$  and  $p < 2^p$  which means  $|y| < 2^p$   
 $|xyyz| = |xyz| + |y| < 2^p + 2^p$   
Condition 2.)  $|y| > 0$   
so  $2p < |xyyz| < 2^{p+1}$   
Thus the length of xyyz cannot be a power of 2 and is a contradiction
